

SkyRock Agency LLC

Practical AI, **custom-built** for your business, from the first idea to software your team uses every day.

We build it

We train your team

We keep it running

HOW WE WORK four steps, in the order that makes sense. Nobody commits to a big project on day one.

1

Free discovery meeting

30 minutes · free

Bring one real problem. We tell you plainly whether AI helps, what it takes, and what it costs. "Not yet" is an honest answer.

2

AI readiness assessment

Two weeks · from \$1,500

We review your processes, data, systems and risks, then deliver a prioritized roadmap and a fixed-price quote for the top project. Fee credited toward step 3.

3

Pilot build

Fixed scope · from \$4,500

One working tool from the roadmap: document or order intake, an assistant that reads your documents, a custom connector (MCP), or a customer portal. With tests and docs.

4

Run & train

From \$450 per month

Hosting, monitoring, updates, a real person to call, plus hands-on training for your team.

Also: a 90-minute team AI workshop for \$249 through December 31 (normally \$750), credited toward an assessment booked within 30 days · and we speak to chambers, clubs and associations for free.

BUILT BY US working software you can see today

VIDEO ON THE SITE

AviatorHub

preflight briefing for pilots
Weather, NOTAMs, terrain and airspace from the FAA, turned into one plain-English briefing with a go/no-go call.

Email

PDF

Fax

EDI 850

SmartOrder

purchase orders to EDI · video on the site
Reads an order however it arrives, pulls out every line item, and produces a clean EDI document your systems take straight in.

Book the Cessna for Friday at 9.

Reserved. Want the invoice created now?

Just talk to it

natural-language flight leasing
A booking website's API wrapped in an MCP server, so staff add reservations and create bills by asking.

ENGLISH

weathered the night

→ ROCKET PHONICS

e e r d u i

Rocket Phonics

translator app, in use today
Any English text, back in the Rocket Phonics reading format in one click. Months of hand annotation became minutes.

“Creating Rocket Phonics meant typing every prompt by hand, months of work as the program grew past 600 pages. SkyRock Agency LLC automated that with AI, and it now takes minutes. We're grateful.

Stephen Guffanti, MD, CEO, Rocket Phonics Foundation
